EDUCATION

University of Central Florida

Bachelor of Science in Computer Science GPA: 3.7/4.0

Orlando, FL

December 2027

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, SQL, C/C++, HTML/CSS

Frameworks & Technologies: React, Next.js, FastAPI, NodeJS, AWS, Docker, PostgreSQL, Supabase, Prisma, MongoDB, tRPC, TailwindCSS, OpenCV, MediaPipe

Tools & Concepts: Git, Linux, REST APIs, CI/CD, Unit Testing, Agile, Machine Learning, Computer Vision

EXPERIENCE

Software Engineer Intern

Aug. 2024 – Present

Siemens Energy

Orlando, FL

- Developed a Java frontend for a computational app used by 1,000+ engineers, integrating Python/Matlab scripts and optimizing UI for **20% faster load times**.
- Maintained a CI/CD pipeline, powered by Linux runners for efficient testing, deployment, and continuous application updates, automating releases and **reducing deployment time by 50%**.
- Implemented GitFlow branching strategy utilizing feature branches and pull requests, **accelerating feature integration by 30%** and **reducing code review cycle time by 15%**.

Software Engineer Intern

Jan. 2026 – Present

Knight Hacks

Orlando, FL

- Contributed to Blade, a Next.js-based platform powering Florida's largest hackathon (1,000+ users), building backend improving scalability to handle high-concurrency event traffic.
- Processed payments for 1,000+ users with zero transaction failures by implementing Stripe webhooks, idempotency safeguards, and PostgreSQL integration.
- Decreased **frontend-backend latency by 25%** by implementing a type-safe API layer using tRPC, ensuring seamless data synchronization and eliminating redundant request handling.

Computer Science Technical Chair

Jun. 2025 – Present

Society of Asian Scientists and Engineers (SASE)

Orlando, FL

- Organized and led engaging technical workshops on web development, AI, and algorithms, fostering an inclusive learning environment and boosting **CS-related participation by 35%**.
- Founded and led the UCF SASE Web Development Team, managing 15+ frontend, backend, and UI/UX developers to deliver internal tools using Agile methodologies.

PROJECTS

Emergent - AI Crisis Simulation | Next.js, React, Google ADK, Gemini, FastAPI

[GitHub](#)

- Built an AI-powered crisis simulation platform modeling **50+ personas** across a 13-phase disaster timeline, enabling emergency managers to run realistic response training scenarios.
- Engineered a full-stack system by integrating a Next.js/React frontend with a FastAPI backend and Google ADK + Gemini multi-agent workflows, enabling scalable human-behavior simulation.
- Won **Best Overall Hack at KnightHacks 2025** and **1st place at UCF Innovation Tournament** for innovation in AI-driven human behavior simulation.

SignHero - ASL Rhythm Game | Python, MediaPipe, OpenCV, Next.js, MongoDB, tRPC, Prisma

[GitHub](#)

- Won 2nd Overall and Best Game Design at SwampHacks by building an AI-powered ASL rhythm game, ranking above 40+ teams through strong gameplay polish and UX.
- Designed real-time hand tracking and gesture classification using MediaPipe and a custom MobileNetV2 model, achieving **sub-50ms latency** and **90%+ recognition accuracy**.

Singularity - Deep Reasoning Model | Python, PyTorch, CUDA, Gemini, MCTS, Gemma

[GitHub](#)

- Developed an innovative custom reasoning model with Gemma combined with a world model to solve ARC-AGI-3 tasks, improving benchmark performance from **22% to 38%**.
- Implemented an agentic search pipeline using Monte Carlo Tree Search (MCTS) and Gemini 2.5 Flash, enabling efficient exploration and evaluation of solution spaces.
